1. Start h2 database
2. Copy questions.sql file located in the root of the project and execute it in h2 in order to generate the table questions with all the content
3. To use the connection with database
- Add Classpath: Add external jar of h2 (h2-1.4.197.jar) to achieve the sucess connection
4. Make sure that the file app.properties is in the VM arguments
- Example(-Dapp.properties="/home/antoan/Documents/M1S1/Java/Quiz/app.properties")
5. Execute QuizMain in the launcher package
